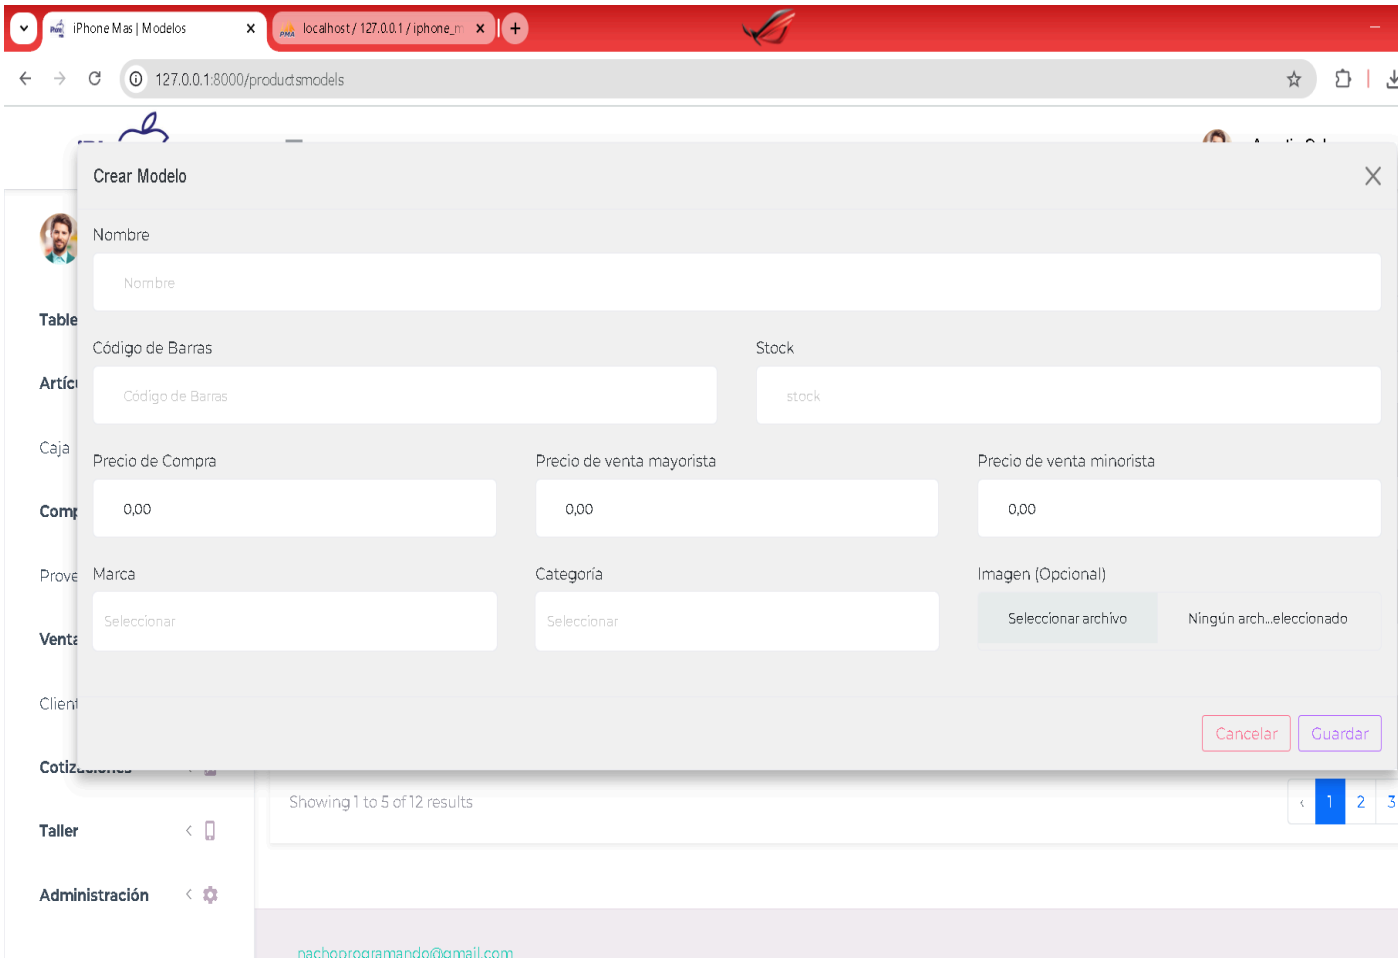
1. Product condition: Sealed or Used

Add a drop-down list to the product form to indicate whether the product is sealed or used.

http://127.0.0.1:8000/productsmodels > new



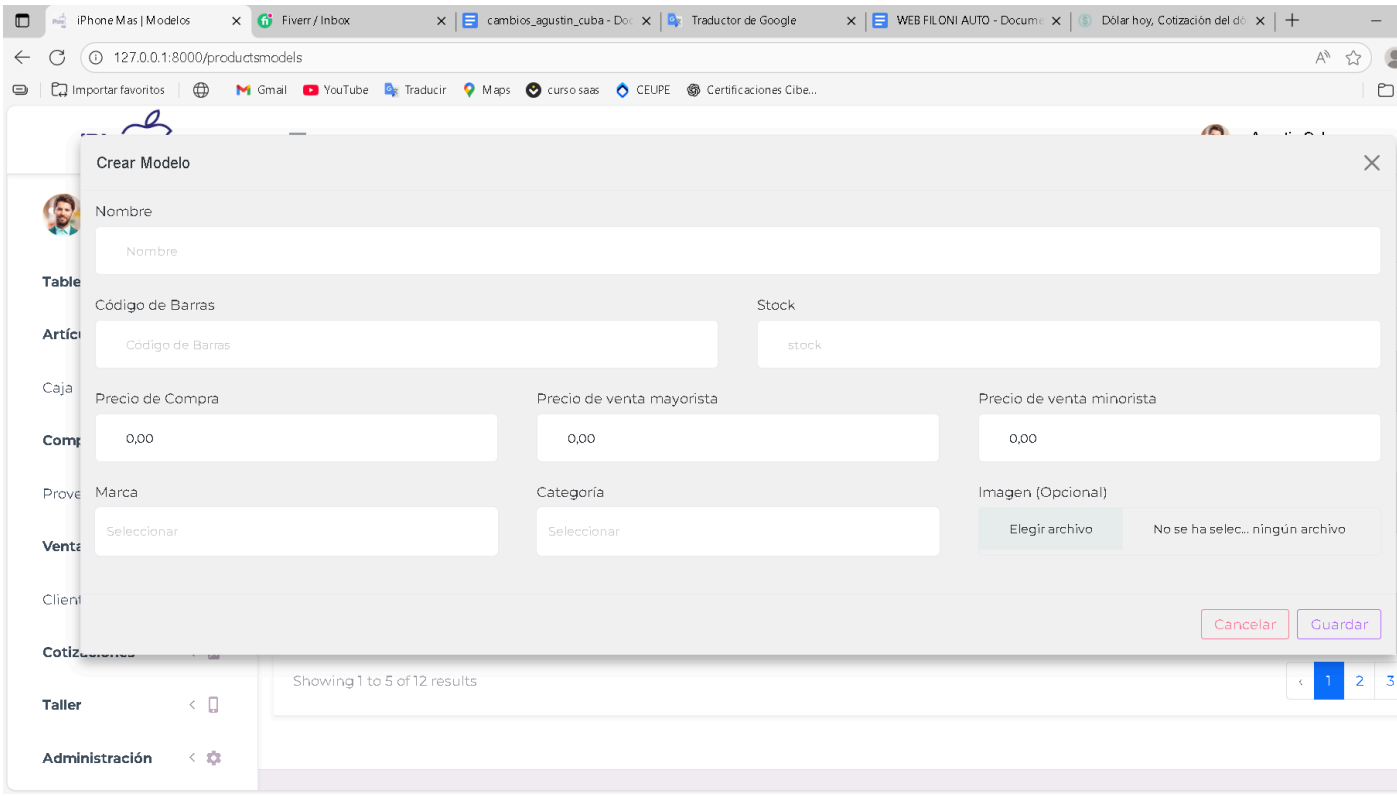
2. Colors and storage capacity (GB) by model

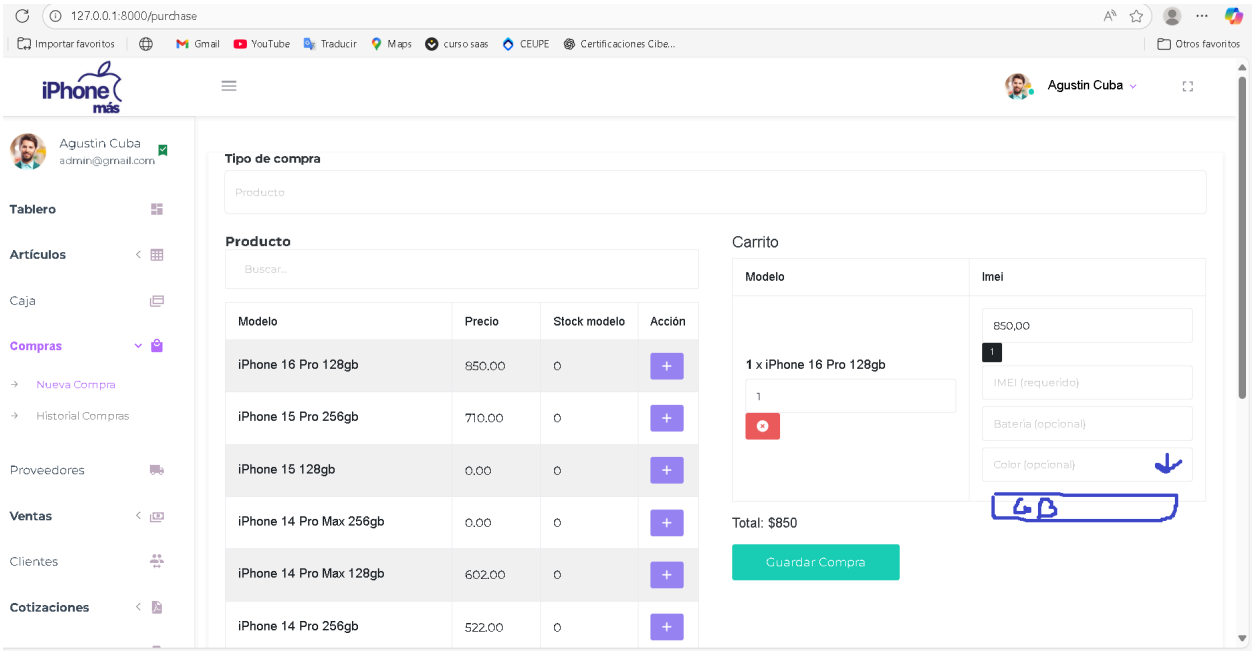
In the model configuration, allow loading of available colors and storage capacities for that model.

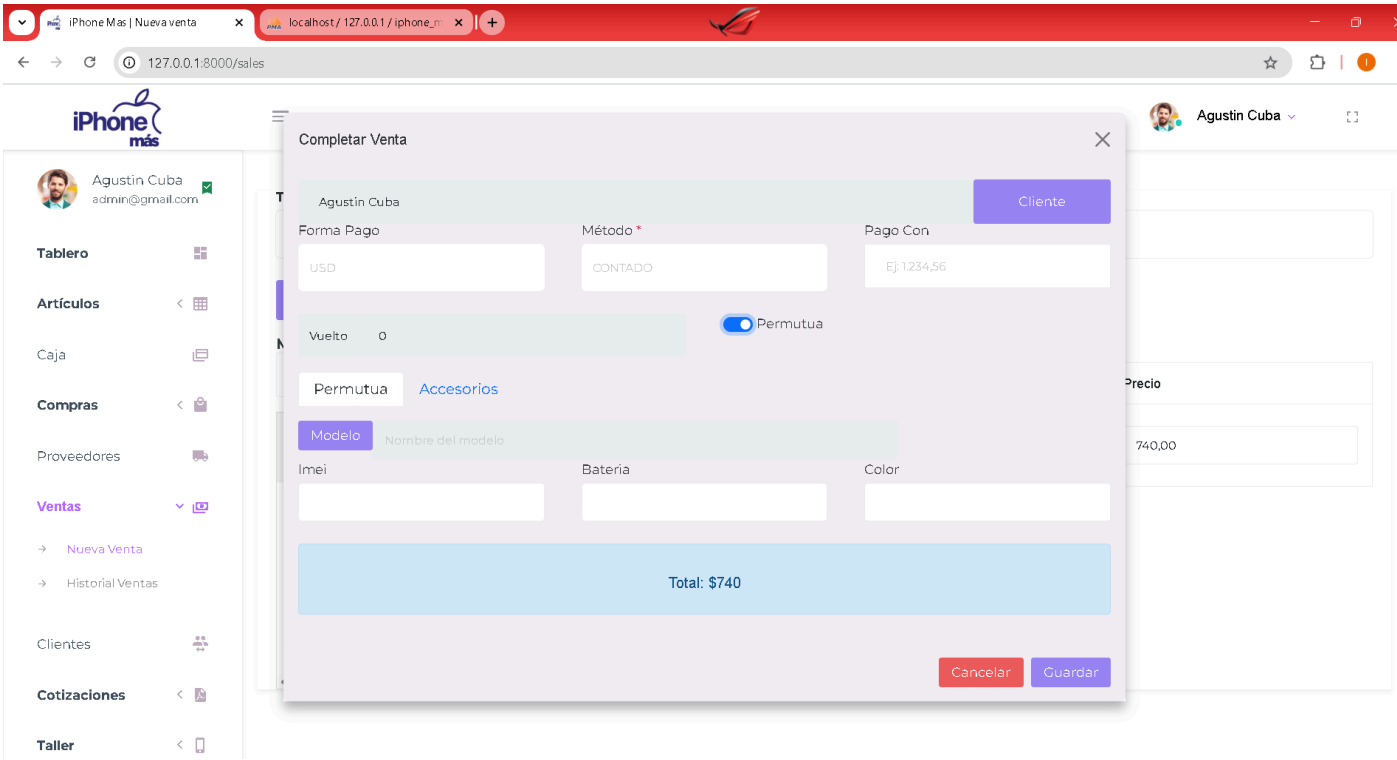
http://127.0.0.1:8000/productsmodels > new

When recording a purchase, these predefined options should be selectable, in addition to the data already uploaded (IMEI, battery, and current color). Color should be a drop-down list from what was previously uploaded, and GB should be another drop-down list.

When making a sale and recording a trade-in, these fields should also appear.







3. Miscellaneous expenses (PURCHASE)
Add a chart and total number showing expenses classified as “Miscellaneous Expenses.”

4. Location of products, accessories and spare parts
In the product, accessory, and spare parts forms, add a field to indicate their physical location (for example: warehouse, display case, workshop, etc.). This must also be displayed in the grids.

5. Product history by IMEI
View the history of a previously sold product based on its IMEI.
Add the product status to the history: Delivered or Under Warranty.

6. All cell phones have a warranty
60-day warranty from the date of sale.
Change status when the 60-day period expires to no warranty.

7. Detail of payment methods in the sale
The sales closing statement should show a breakdown of the different payment methods used, indicating which method was used to pay and how much was paid with each. To do this, add a "+" button to the sales form to add more payment methods. Each time it's pressed, a new box appears to detail a specific amount (for example, part in dollars, part in pesos, and part in cryptocurrency). The total paid box—which already exists and maintains all its functionality—will remain the primary reference in dollars. This breakdown serves only to show how the total entered in that box is arrived at, without impacting the metrics. Furthermore, the section where all sales are displayed on the ticket should show this complete detail of the payment methods along with the total in dollars, which is the amount actually used for metrics and reports.

8. Exchange and seller information
For barter sales, record:
Who received the barter (user list).
Who handled the sale (user list).

9. Details of telephones from exchange
In the Sales > Save > Trade-in flow, allow you to add a description of the condition or details of the product received in the trade-in.

This description should be recorded and visible in Items > Product, along with the item's general information.

This field must be mandatory both when making a purchase of a phone... and when receiving a trade-in for a phone that comes in through a sale.
